

# MatrixCMS - Labs & Procedures

What each menu does, who uses it, and the order flow

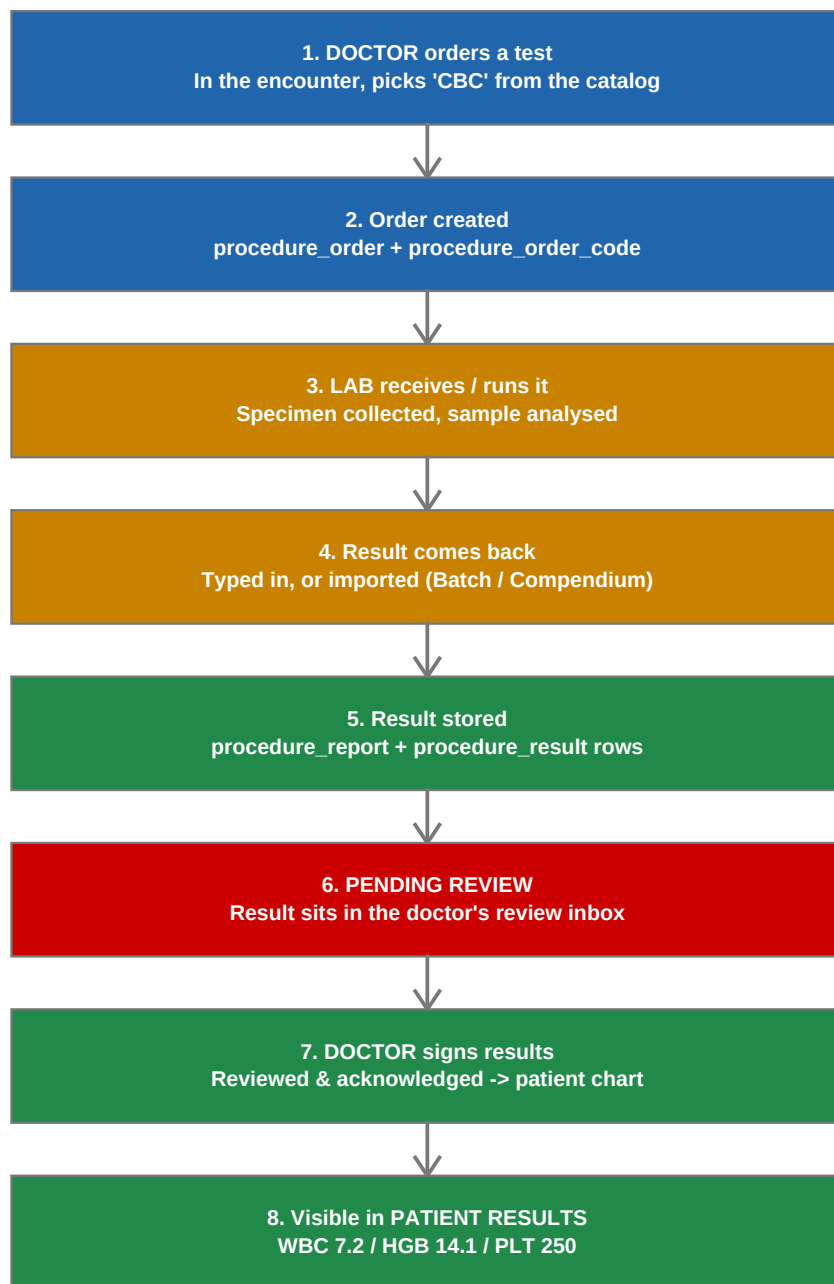

The Procedures menu = 2 jobs: SET UP the lab, then USE it

| A) ONE-TIME SETUP (Admin)                                                                                 | B) EVERY DAY (Doctor / Lab / Biller)                                                                |
|-----------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------|
| <b>Procedure Providers</b><br>Register each LAB company (name, NPI, connection). = the vendor list.       | <b>Procedure Orders &amp; Reports</b><br>Search / track every order + its report. The control desk. |
| <b>Configure Orders &amp; Results</b><br>Build the catalog tree: Lab > Panel(CBC) > Results(WBC,HGB,PLT). | <b>Pending Review</b><br>Inbox of NEW results waiting for a doctor to sign off.                     |
| <b>Load Lab Compendium</b><br>Shortcut: UPLOAD the vendor file to auto-build that catalog.                | <b>Patient Results</b><br>One patient's results inside the chart (what you saw: WBC/HGB/PLT).       |
|                                                                                                           | <b>Batch / Process Results</b><br>Import many electronic results at once + match to orders.         |
|                                                                                                           | <b>Lab Documents</b><br>PDF result files received from the lab, listed by date.                     |

*Rule of thumb: the LEFT column you touch once when setting up a new lab. The RIGHT column is the daily clinical + billing work. You can build the catalog by hand (Configure Orders & Results) OR import it (Load Lab Compendium) - same result.*

# The Lab Order Lifecycle

From the doctor ordering a test to a signed result - and who does each step

## Who + which menu

### DOCTOR

Orders the test inside the encounter (Procedure Order form).

### LAB TECH

Runs the test, enters results - or they arrive electronically.

### Procedure Orders & Reports

Billers/admin tracks ALL orders & reports here.

### Pending Review

Doctor's inbox of unsigned results.

### Patient Results

Result shown inside that patient's chart.

### Lab Documents

Any PDF the lab sent, by date range.

# The Demo Data We Created

Exactly what is now in the system for patient Rajesh Mehta

## Setup (left column of the menu)

- Procedure Provider: 'MatrixCMS Diagnostics Lab' (NPI 1990000099, HL7)
- Compendium tree (Configure Orders & Results):
  - MatrixCMS Diagnostics Lab [Tier 1 - Lab]
    - ☐ Complete Blood Count (CBC) [Tier 2 - Order]
      - ☐ WBC 4.0-11.0  $10^3/\mu\text{L}$  [Tier 3 - Result]
      - ☐ HGB 13.0-17.0 g/dL [Tier 3 - Result]
      - ☐ PLT 150-400  $10^3/\mu\text{L}$  [Tier 3 - Result]

## Live order (right column of the menu)

- Order #1 for Rajesh Mehta, encounter 34, ordered by Dr. Smith
- Report status: final -> Results: WBC 7.2, HGB 14.1, PLT 250 (all normal)
- Now linked to MatrixCMS Diagnostics Lab and attached to the encounter form, so it appears in Patient Results AND Procedure Orders & Reports.

## How to SEARCH (Procedure Orders & Reports)

1. Set the From / To date range (e.g. 2026-05-31 to 2026-06-03).
2. Pick the Lab (All Labs) and the Provider (John Smith).
3. Tick 'Current Patient Only' to limit to the open patient, or untick for everyone.
4. Click Filter. Each row = one order with its procedure code and report date.

## Lab Documents (the From/To you asked about)

This screen lists PDF/scanned result files the lab SENT, filtered by upload date.  
Empty = no document files uploaded yet (our results were typed in, not file uploads).  
A file appears here once a lab result document is uploaded against the patient.
