User & Patient Workflow

How each role logs in and what they do - end to end

Roles in this system

	Administrator	FTS-admin-63	Andheri
	Doctor - Family Medicine	dr.smith	Andheri
	Doctor - Cardiology	dr.kumar	Bandra
	Nurse (Clinician)	nurse.jane	Andheri
	Receptionist (Front Office)	reception.maya	Andheri

Login URL: http://localhost/open_cms/interface/login/login.php

The role (set by the Administrator) decides which menu tabs and buttons each user sees after login - the same login page gives every role a different screen.

1. The Big Picture - End to End

One patient visit, from registration to payment

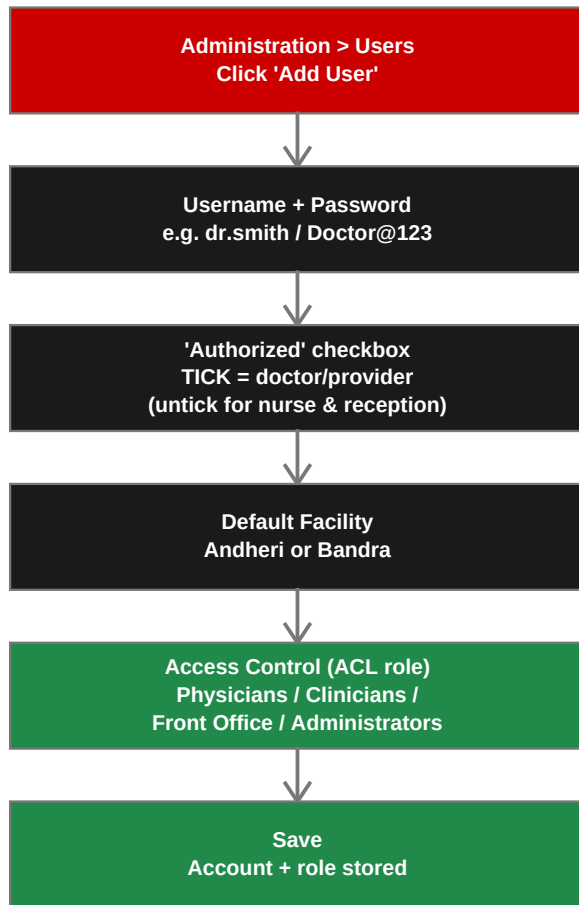

In one line: Receptionist registers & books > Nurse checks in & takes vitals > Doctor documents, prescribes & codes > Receptionist takes payment. The Admin sits above all of this, creating the logins.

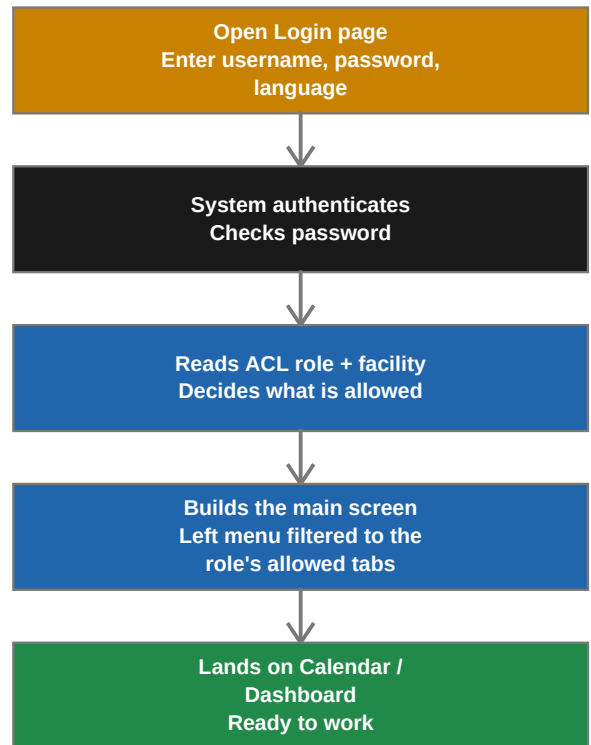

2. User Creation & Login Process

How the Admin sets up an account, and what login does

A) Admin creates a user

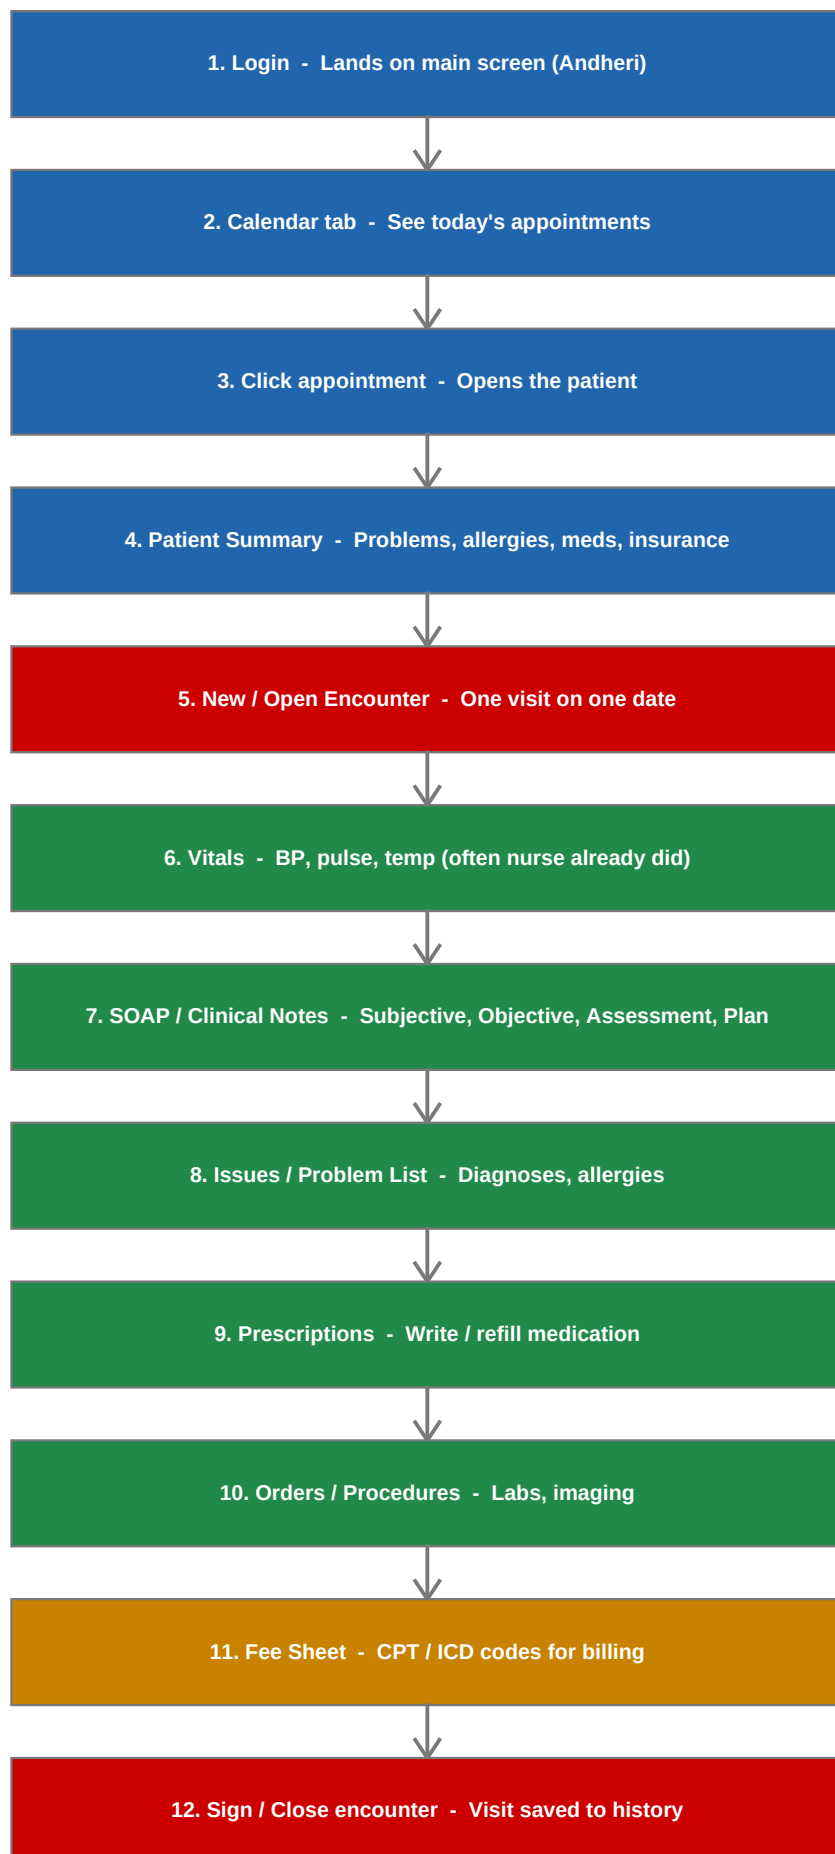

B) Any user logs in

Key point for your boss: every role uses the SAME login page, but the ACL role chosen at user-creation time controls which tabs appear. A Front-Office user never sees clinical notes; a Bandra doctor only sees Bandra patients.

3. Doctor Flow in Detail

Login as dr.smith (Doctor@123) - the main demo

Same screen, other roles

dr.kumar

Identical flow, but FACILITY = Bandra. Only sees Bandra calendar & patients.

nurse.jane

Pre-doctor: check-in 'arrived', enter Vitals, update allergies/meds. Not a provider.

reception.maya

Front desk: register patients, schedule on Calendar, check-in/out, collect co-pay. No clinical notes.

Summary:

Login > Calendar > click appt >

Summary > Encounter >

Vitals/SOAP/Rx/Orders > Fee Sheet >

Sign-off.
